ARTICLE INFO

The Indonesian economy at this time cannot be separated from financial services such as banking. Banks on a daily basis need to show their performance so that bank service users can see whether the bank is good or not. The purpose of this study was to compare the soundness of banks at PT Bank Capital Indonesia Tbk and PT Bank Jago Tbk for the 2018-2020 period using the RGEC method. The object of this research is PT Bank Capital Indonesia Tbk and PT Bank Jago Tbk. The data used is quantitative data. The data source used is secondary data in the form of financial reports that have been published by the official website www.bankcapital.co.id and www.jago.com or through the official website www.idx.co.id. The technique used is the documentation technique. And the analysis technique used is Bank Indonesia regulation No. 13/1/PBI/2011. The results of this study indicate that the assessment of the Risk Profile on the NPL ratio of PT Bank Capital Indonesia Tbk and PT Bank Jago Tbk in Healthy conditions, and the assessment of the LDR ratio of PT Bank Capital Indonesia Tbk in Very Healthy conditions while PT Bank Jago Tbk in Healthy conditions. For the assessment of GCG aspects, the Self Assessment of PT Bank Capital Indonesia Tbk is in Good Enough condition, while PT Bank Jago Tbk is in Good condition. Furthermore, for the assessment of the Earnings aspect of the ROA ratio to PT Bank Capital Indonesia Tbk in an Unhealthy condition, while PT Bank Jago Tbk in an Unhealthy condition. And the assessment of the...
INTRODUCTION

The economy in Indonesia at this time cannot be separated from financial services such as banking. Banking is a pillar in shaping the economic and financial system in Indonesia, because banking has a very crucial role as an intermediary institution, which is a financial forum that connects funds owned by surplus economic units to economic units that need funds (deficit).

The existence of a bank must be useful and can be felt directly by the parties who use the services of the bank. Banks on a daily basis need to show their performance so that bank service users can see whether the bank is good or not, and can increase the interest of bank service users from the community, entrepreneurs, creditors and other bank service users (Santoso, n.d.).

Financial statements are one form that can be used to assess the company's performance whether the company is in good condition or not. The purpose of financial statement analysis is to assist users in estimating the company's future by comparing, evaluating, and analyzing trends from various aspects of the company's finances (Bambang Wahyudiono & MM, 2014).

Financial performance is an analysis carried out to see the extent to which a company has implemented it using financial implementation rules properly and correctly (Fahmi, 2012). The bank's financial performance can be seen from the financial statements issued periodically where the financial statements prove the actual state of the bank.

Based on the Circular Letter of Bank Indonesia No. 30/3/UPPB dated April 30, 1997, the assessment of the soundness of a bank can be measured using the CAMEL method which means Capital, Assets, Management, Earnings (Rentability), and Liquidity (Liquidity). In 2004 Bank Indonesia issued Bank Indonesia Regulation No. 6/10/PBI which meant an improvement from the previous method by adding a factor called Sensitivity to Market Risks so that it was claimed by the term CAMELS (Wardayati & Sayekti, 2021).

Due to the rapid development of the national banking system, which resulted in Bank Indonesia changing the method of assessing the soundness of banks, Bank Indonesia issued a new regulation regarding the assessment of bank soundness using a risk approach (Risk-Based Bank Rating) which was set on October 25, 2011 which includes four factors, namely the Risk Profile, Good Corporate Governance (GCG), Earnings (Profitability), and Capital which is known as RGEC. RGEC is a method of assessing bank financial performance based on Bank Indonesia Regulation No. 13/1/PBI/2011 regarding the assessment of financial performance at commercial banks (Shanjaya & Marlius, 2017).

At the time of the Covid-19 Pandemic phenomenon, many companies and financial institutions were worried about their financial reports because the Indonesian economy was currently weakening. But on the other hand, the Covid-19 pandemic can result in an accelerated shift in consumer lifestyles (Nisa, Nainggolean, & Faturohman, 2021). With the limited space for people to move, the need for digital solutions to access various kinds of financial services is increasing. Currently, digital bank users in Indonesia are increasing, as many as 25% of Indonesian adults have digital bank accounts by 2021 (Mujiburrahman, 2021). This figure reaches 47,722,913 adults in Indonesia. In accordance with Bank...
Indonesia data, the value of digital transactions in 2021 on an annual basis (yoy) will be IDR 17,901.76 trillion, an increase of 39.39%.

PT Bank Capital Indonesia Tbk (Bank Capital) is one of the financial institutions in Indonesia which is engaged in business activities in the banking sector. Bank Capital has carried out a digital transformation, namely the availability of mobile banking and internet banking, where these developments will affect consumer behavior in transactions which will encourage the growth of E-commerce (Subramanyam, 2012). Meanwhile, PT Bank Jago Tbk (Bank Jago) is a financial institution that has financial applications that work with life-centric principles. Bank Jago is built with digital banking experience and microfinance lending. Bank Jago was developed to be a pioneer of digital finance in Indonesia (Fauziah, 2021).

The purpose of this study was to compare the level of bank soundness at PT Bank Capital Indonesia Tbk and PT Bank Jago Tbk for the 2018-2020 period from the aspects of Risk Profile, Good Corporate Governance, Earnings, Capital.

**RESEARCH METHOD**

The object of research used is PT Bank Capital Indonesia Tbk and PT Bank Jago Tbk, which have published their financial statements for the 2018-2020 period (NurKhikmah, 2021). The type of data used is quantitative data, which contains numbers ranging from collection, processing, and results that are dominated by numbers.

The data source used is secondary data, which is obtained indirectly or through third party intermediaries through the official websites of PT Bank Capital Indonesia Tbk and PT Bank Jago Tbk or also through the IDX website. The data collection technique used in this research is documentation technique, which is the method used to obtain books, archives, documents, writings, pictures and numbers (Zhu, Sari, & Lee, 2018). So the authors collect data through the official website of PT Bank Capital Indonesia Tbk and PT Bank Jago Tbk or also through the official website of the IDX (Anggadya & Shahadat, n.d.).

The analytical technique used is a technique using Bank Indonesia Regulation Number 13/1/PBI/2011 concerning the Assessment of Commercial Bank Soundness Levels using a risk approach (Risk-based Bank Rating) with an assessment coverage of the following factors:

1. Risk Profile
   a) Credit Risk

\[
NPL = \frac{Troubled Credit}{Total Credit} \times 100%
\]

(Source: SE No.13/24/DPNP/2011)

b). Liquidity Risk

\[
LDR = \frac{Total Credit}{Third party funds} \times 100%
\]

(Source: SE No.13/24/DPNP/2011)

1. Good Corporate Governance (GCG)

The analysis in the circular uses the Good Corporate Governance self-assessment working paper published by Bank Indonesia. Over time, Bank Indonesia again issued a
Cariniah, Lasminiasih

Circular Letter of Bank Indonesia No.15/15/DPNP of 2013 concerning the Assessment of Good Corporate Governance.

2. *Earnings*

\[
ROA = \frac{\text{Profit before tax}}{\text{Average Total Asset}} \times 100\%
\]

(Source: SE No.13/24/DPNP/2011)

3. *Capital*

\[
CAR = \frac{\text{Capital}}{\text{Average Total Asset}} \times 100\%
\]

(Source: SE No.13/24/DPNP/2011)

RESULT AND DISCUSSION

(Source: Data processed by the author)

Based on the table above, it can be seen that there are results of the comparison of the NPL ratio at Bank Capital in 2018-2020. In 2018 the NPL ratio at Bank Capital was 2.95% with the title Healthy. In 2019, the NPL ratio at Bank Capital was 3.48% with the title Healthy. Meanwhile, in 2020 the NPL ratio at Bank Capital is 0% with the title Very Healthy. So that the average NPL ratio at Bank Capital is 2.14% with a healthy predicate.

This shows that the NPL ratio at Bank Capital in 2018-2020 is below 5% which illustrates that a bank is still categorized as a healthy bank in terms of credit risk management or handling. The peak of the increase in the NPL ratio at Bank Capital occurred in 2019 with a gain of 3.48% due to pressure from declining credit quality in
several business segments and economic developments that were still declining, resulting in slow growth of national banking credit.

While the results of the comparison of the NPL ratio at Bank Jago in 2018-2020. In 2018 the NPL ratio at Bank Jago was 6.16% with the title Fairly Healthy. In 2019, the NPL ratio at Bank Jago was 2.04% with the title Healthy. Meanwhile, in 2020 the NPL ratio at Bank Jago was 0% with the title Very Healthy. So that the average NPL ratio at Bank Jago is 2.73% with the title Healthy.

This shows that the NPL ratio at Bank Jago in 2018-2020 is below 5% which illustrates that a bank is still categorized as a healthy bank in terms of credit risk management or handling. The peak of the increase in the NPL ratio at Bank Jago occurred in 2018 with the acquisition of 6.16% due to pressure from declining credit quality in several business segments and economic developments that were still declining, resulting in slow growth of national banking credit.

(Sumber : Data diolah oleh penulis)

Based on the table above, it can be seen that there are results of the comparison of the LDR ratio at Bank Capital in 2018-2020. In 2018 the LDR ratio at Bank Capital was 51.96% with the title Very Healthy. In 2019, the LDR ratio at Bank Capital was 60.55% with the title Very Healthy. Meanwhile, in 2020 the LDR ratio at Bank Capital was 39.33% with the title Very Healthy. So that the average LDR ratio at Bank Capital is 50.61% with the title Very Healthy.

This shows that the LDR ratio at Bank Capital is below 75% which illustrates that a bank is categorized as a very healthy bank in terms of measuring a bank's liquidity against its short-term liabilities. The peak of the increase in the LDR ratio at Bank Capital occurred
in 2019 with an acquisition of 60.55% because the higher the LDR level, the more illiquid a bank is, meaning that the bank will find it difficult to meet its short-term obligations.

While the results of the comparison of the LDR ratio at Bank Jago in 2018-2020. In 2018 the LDR ratio at Bank Jago was 76.74% with the title Healthy. In 2019 the LDR ratio at Bank Jago was 47.54% with the title Very Healthy. Meanwhile, in 2020 the LDR ratio at Bank Jago was 112.94% with the title Unhealthy. So that the average LDR ratio at Bank Jago is 79.07% with the title Healthy.

This shows that the LDR ratio at Bank Jago is below 85% which illustrates that a bank is categorized as a healthy bank in terms of measuring a bank's liquidity against its short-term liabilities. The peak of the increase in the LDR ratio at Bank Jago occurred in 2020 with the acquisition of 112.94% because the higher the LDR level, the more illiquid a bank is, meaning that the bank will find it difficult to meet its short-term obligations.

(Source: Data processed by the author)

Based on the table above, it can be seen that there are comparative results of the Self Assessment of GCG Implementation at Bank Capital in 2018-2020. In 2018 Bank Capital had a Self-Assessment at a composite rating of 2 with a good predicate. Meanwhile, in 2019 Bank Capital had a Self-Assessment at a composite rating of 3 with a Pretty Good predicate. And finally, in 2020, Bank Capital has a Self-Assessment at a composite rating of 3 with a Pretty Good predicate. So that the average Self Assessment at Bank Capital has a composite rating of 2.6 with the predicate of Fairly Good.

This shows that the Self Assessment of GCG Implementation at Bank Capital is below the composite rating of 3.5 which illustrates that a bank is categorized as a bank that
is quite good in terms of stability and sustainability of a bank. The peak of the increase in Self-Assessment Implementation of GCG at Bank Capital occurred in 2019-2020 with the acquisition of 3 because the higher the level of Self-Assessment at the bank, the higher the company’s performance, especially financial performance and reducing the risks undertaken by the board of directors to make decisions that benefit themselves and can also increase investor confidence.

While the results of the comparison of the Self Assessment of GCG Implementation at Bank Jago in 2018-2020 (Fatonah, Dharma, & Mastuti, n.d.). In 2018 Bank Jago had a Self-Assessment at a composite rating of 3 with a Pretty Good predicate. Meanwhile, in 2019 Bank Jago had a Self-Assessment at a composite rating of 2 with a good predicate. And finally in 2020 Bank Jago had a Self Assessment at composite rank 3 with the predicate of Fairly Good (De, 2020). So that the average Self Assessment at Bank Jago has a composite rating of 2.3 with a good predicate.

This shows that the self-assessment of the bank is below the composite rating of 2.5 which illustrates that a bank is categorized as a healthy bank in terms of the stability and sustainability of the bank. The peak of the increase in the Self-Assessment of GCG Implementation at Bank Jago occurred in 2018 with the acquisition of 3 because the higher the Self-Assessment level at the bank, the higher the company’s performance, especially financial performance and reducing the risks undertaken by the board of directors to make decisions that benefit themselves and can also increase investor confidence.

</tbody>
</table>

(Source: Data processed by the author)

Based on the table above, it can be seen that there are results of the comparison of the ROA ratio at Bank Capital in 2018-2020. In 2018 the ROA ratio at Bank Capital was
0.83% with the title Fairly Healthy. In 2019, the ROA ratio at Bank Capital was 0.13% with the predicate of Less Healthy. Meanwhile, in 2020 the ROA ratio at Bank Capital was 0.40% with the predicate of Less Healthy. So that the average ROA ratio at Bank Capital is 0.45% with the predicate of Less Healthy.

This shows that the ROA ratio at Bank Capital is below 0.5% which illustrates that a bank is categorized as an unhealthy bank in terms of how effectively a bank uses its assets in generating profits. The peak of the ROA ratio increase at Bank Capital occurred in 2018 with a gain of 0.83% which means a decrease because the bank allocates a significant portion of operating profit to increase the Allowance for Impairment Losses (CKPN) in an increased portion.

While the results of the comparison of the ROA ratio at Bank Jago in 2018-2020. In 2018 the ROA ratio at Bank Jago was -2.44% with the predicate Unhealthy. In 2019 the ROA at Bank Jago was -11.96% with the predicate Unhealthy. Meanwhile, in 2020 the ROA ratio at Bank Jago was -10.83% with the predicate Unhealthy. So that the average ROA ratio at Bank Jago is -8.41% with the predicate Unhealthy.

This shows that the ROA ratio at Bank Jago is below 0% which illustrates that a bank is categorized as an Unsound bank in terms of how effectively a bank uses its assets in generating profits. The peak of the ROA ratio increase at Bank Jago occurred in 2018 with a gain of -2.44% which means a decrease because the bank allocates a significant portion of operating profit to increase the Allowance for Impairment Losses (CKPN) in an increased portion.

(Source: Data processed by the author)

Based on the table above, it can be seen that there are results of the comparison of the CAR ratio at Bank Capital in 2018-2020. In 2018 the CAR ratio at Bank Capital was 14.43% with the title Very Healthy. In 2019 the CAR ratio at Bank Capital was 12.48% with the title Very Healthy. Meanwhile, in 2020 the CAR ratio at Bank Capital was 18.54% with the title Very Healthy. In 2018 the CAR ratio at Bank Jago was -2.44% with the predicate Unhealthy. In 2019 the CAR at Bank Jago was -11.96% with the predicate Unhealthy. Meanwhile, in 2020 the CAR ratio at Bank Jago was -10.83% with the predicate Unhealthy. So that the average CAR ratio at Bank Jago is -8.41% with the predicate Unhealthy.
with the title Very Healthy. So that the average CAR ratio at Bank Capital is 15.15% with the title Very Healthy.

This shows that the CAR ratio at Bank Capital is above 12% which illustrates that a bank is categorized as a very healthy bank in terms of indicating that the bank has a large enough possibility or strong ability to survive in abnormal conditions or crises. The peak of the increase in the CAR ratio at Bank Capital occurred in 2020 with the acquisition of 18.54%, which means that banks still have larger capital reserves and banks are also considered to have managed bank capital well and have capital adequacy (Lee, Wang, & Zhong, 2020).

While the results of the comparison of the CAR ratio at Bank Jago in 2018-2020. In 2018 the CAR ratio at Bank Jago was 19.61% with the title Very Healthy.
